Directions (101-115): Read the following passage carefully and answer the questions given below it. Certain words have been printed in **bold** to help you locate them while answering some of the questions.

In a village in the East, there lived an old couple. They did not have any children and never spent an extra paisa on themselves. They never repaired their house or cooked good food. One day, a family moved into the village. It was their son's second birthday and they sent two delicious laddoos to the bid couple. The couple ate the laddoos with great relish. For days after they could talk of nothing else. Finally the old man could take it no more. He said to his wife, "Let's buy the ingredients to make just two laddoos." His wife agreed but said, "If I make the laddoos at home, the neighbours will know and will want a share. Let's cook in the woods behind our hut. That way no one will ever know."

The next day the old man purchased the ingredients from the market and they set off to the woods. Having never prepared food like this before, they ended up with three laddoos instead of two. The old couple returned home with the sweets, dying to eat them. But there was a problem. "It was my idea and I went to the market, so I ought to get two," said the old man. But his wife refused to give in so easily and said, "Since I prepared the sweets, I ought to have two. "The day wore on and the argument continued.

At last, the old man suggested, "Let us not talk to each other. Whoever breaks the silence first will get one laddoo and the other person two." His wife agreed. Hours passed, but neither of them spoke and finally they fell asleep with the bowl of sweets between them. That evening one of the neighbours knocked on the door b,ut the couple did not answer for fear of losing the bet. Peering through the window, the man saw the couple lying on the floor with an untouched bowl of food. "They are dead!" He shouted and alertefd the other villagers. Soon the door was broken down and the house was swarming with villagers. They discussed everything from the funeral to where the couple had hidden their wealth. But the couple lay still.

Finally, the villagers carried them to the cremation ground. As the flames licked his feet, the old man jumped up screaming "You win!" His wife jumped up too, happy that she had won. The two then rushed home leaving the bewildered villagers present there behind. But when they got home.... Alas the door had been left open and they found a stray dog licking the **last** crumbs of the sweets from the bowl.

 $(240 \div 2) - 2 = 120 - 2 = 118$

$$(118 \div 2) - 2 = 59 - 2 = 57$$

 $(57 \div 2) - 2 = 28.5 - 2 = 26.5$

87. (4) The pattern of the numb series is:

$$16 \times 3 + 3^2 = 57$$

$$57 \times 4 + 4^2 = 228 + 16 = 244$$

$$244 \times 5 + 5^2 = 1220 + 25 = 1245$$

90. (3) The pattern of the number series is :

$$6.75 \times 2 + 2 = 15.5$$

$$15.5 \times 2.5 + 2.5 = 38.75 + 2.5$$

$$\Rightarrow x = 25$$

From statement II,

$$y \times \frac{30}{100} = \frac{72 \times 25}{100}$$

$$\Rightarrow y = 60$$

$$x: y = 25: 60 = 5: 12$$

96. (4) Cost price of 30 kg of wheat $= 30 \times 45$

Total SP for an overall profit of

$$25\% = \frac{1350 \times 125}{100} = \text{Rs. } 1687.5$$

Sp of 12 kg $\left(\frac{30 \times 40}{100}\right)$ of wheat

$$= 12 \times 50 = Rs. 600$$

Expected SP of 18kg of remaining wheat

= 1687.5 - 600 = Rs. 1087.5

Required selling price per kg

$$=\frac{1087.5}{18} \approx \text{Rs. } 60$$

97. (4) According to the question,

$$\frac{P \times R \times 6}{100} \quad \frac{P \times R \times 4}{100} \times \frac{150}{100}$$

This relation gives no result.

98. (3) Let the amount received by P. Q and R be Rs. 3x, Rs. 5x and Rs. 7x respectively.

$$\therefore 7x - 5x = 4000$$

$$\Rightarrow x = \frac{4000}{2} = 2000$$

: Amount received by P and Q together = 8x

 $= 8 \times 2000 = \text{Rs. } 16000$

99. (1) Let the number be x.

$$\therefore x \times \frac{1}{5} \times \frac{3}{4} \times \frac{2}{3} = 15$$

$$\Rightarrow x = 150$$

$$\therefore 30\% \text{ of } 150 = \frac{150 \times 30}{100} = 45$$

100. (2) Time taken by trains in crossing each other

> Sum of lengths of trains Relative speed

60 kmph =
$$\frac{60 \times 5}{18} = \frac{50}{3}$$
 m/sec.

If the speed of other train be x m/sec. then, ਜਿ

$$10.8 = \frac{180 + 270}{\frac{50}{3} + x}$$

$$\Rightarrow$$
 180 + 10.8x = 450

$$\Rightarrow 10.8x = 450 - 180 = 270$$

$$\Rightarrow \chi = \frac{270}{10.8} = 25 \text{ metre/sec.}$$

$$=25\times\frac{18}{5}$$
 kmph

= 90 kmph

101. (5) let the numbers be x and yrespectively.

According to the question,

$$y - \frac{x \times 30}{100} = \frac{4}{5}y$$

$$y = \frac{3x}{10}$$

$$\Rightarrow x: y = \frac{10}{3 \times 5} = 2:3$$

102. (5)
$$20\% = \frac{20}{100} = \frac{1}{.5} = 0.2$$

$$\frac{5}{6} = 0.8; \frac{2}{3} = 0.67; \frac{2}{5} = 0.4$$

$$\frac{1}{64} = 0.25; \frac{2}{11} = 0.18$$

$$\frac{1}{64} = 0.25; \frac{2}{11} = 0.18$$

103. (4) Let the present ages of father and son be 5x and 2x years respectively.

After 4 years,

Son's age = y years

and mother's age = 2y years

$$\therefore y = 2x + 4$$

$$\Rightarrow x = \frac{y-4}{2}$$

∴ Father's present age

$$= 5 \frac{(y-4)}{2}$$
 years

Mother's present age

$$= (2y - 4)$$
 years

Clearly, data are inadequate.
