Explanations:-

1. $\lim_{x \rightarrow 0} \frac{\sin \frac{2}{3}x}{x} = \frac{2}{3}$ (Since $\lim_{x \rightarrow 0} \frac{\sin nx}{x} = n$)

2. The probability of appearing two heads = 1/4

3. $\frac{d^3y}{dx^3} + y^2 = -4 \sqrt{\left(\frac{dy}{dx}\right)^3} \left(\left(\frac{d^3y}{dx^3}\right) + y^2 \right)^2 = 16 \left(\frac{dy}{dx}\right)^3$ Order=3, Degree=2

BM=0 at centre.

$R_1 \times L \times P \times L = 0$; $R_1 = -P$

At joint Q = $\sum H = 0 \Rightarrow F_Q R = P$

6. $\tau_{\max} = \frac{\sigma_1 - \sigma_2}{2} = \frac{3 - (-3)}{2} = 3 \text{ MPa}$

11. $\gamma_d = \frac{G\gamma_w}{1+e} = \frac{G\gamma_w}{1 + \frac{\omega G}{s}}$ (\because for zero air void line $s=100\%$) $= \frac{G\gamma_w}{1 + \omega G}$

12. From plasticity Chart A

$I_p = 0.73 (LL - 20)$, $I_{p1} = 0.73 (60 - 20) = 29.3$ For given soil $LL = 60$; $PL = 20$; $I_p = LL - PL = 40$

$I_p > I_{p1}$ it falls above the A-line and for highly compressible clays $LL > 55$

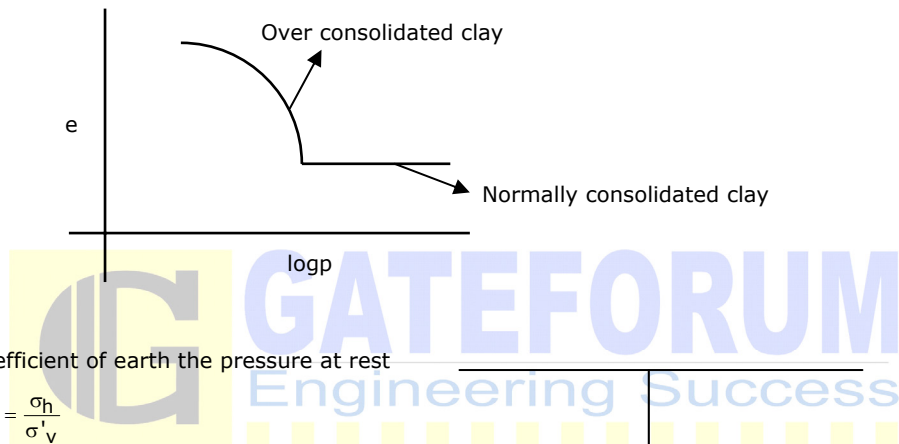

Hence it is CH.

13. For quick sand condition

$$(L + L) \gamma_w A = \gamma_{\text{sat}} \cdot L \cdot A = \frac{(G + e)}{(1 + e)} \cdot L \cdot A$$

So, it is upward sample pressure soil becomes the saturated unit weight or soil.

14.

15. Coefficient of earth the pressure at rest

$$K_0 = \frac{\sigma_h}{\sigma'_v}$$

16.

Profiles are M_2, S_2

17.

$$q_1 = \frac{Q}{B_1}; q_2 = \frac{Q}{B_2} \quad q_2 > q_1$$

From discharge diagram, it can be seen that, for subcritical flow as 'q' increases 'depth' decreases. Therefore the reduced section, depth decreases.

18. P -1, Q-4, R-2, S-3

19. P-2, Q-1, R-4, S-3

20. MSW management technique is composting since waste contains good amount of organic matter.

21. Day time 55db, night time 45 db

22. Adiabatic lapse rate = 0.98°C per 100m

For 500m decrease in temp = 0.9805 × 5 = 4.9°C ≈ 5°C

Therefore at 400m elevation, the air parcel temperature is 40 - 5 = 35°C

26. $y'' + y' - 6y = 0$
 $m^2 + m - 6 = 0$
 $(m+3)(m-2) = 0$
 $m = -3; m = 2$
 $y = C_1 e^{-3x} + C_2 e^{2x}$

27. Determinant = $(3+2i)(3-2i) + (i^2) = 9 + 4 - 1 = 12$

$$A^{-1} = \frac{1}{12} \begin{bmatrix} (3-2i) & -i \\ i & (3+2i) \end{bmatrix}$$

28. $h = 0.25$

Sample sin rule

$$= \frac{h}{3} [\text{First} + \text{last} + 2(\text{odd}) + 4(\text{even})]$$

$$= \frac{0.25}{3} [1 + 0.50 + 2(0.8) + 4(0.9412 + 0.64)] = 0.7854$$

29. $Z = ax + by + ab; \quad p = a; q = b$

$Z = pz + qy + pq.$

30. $\frac{ds}{dx} = \sqrt{1 + \left(\frac{dy}{dx}\right)^2}$

$$L = 2 \int_0^{l/2} \frac{ds}{dx} \cdot dx = 2 \int_0^{l/2} \sqrt{1 + \frac{dy^2}{dx^2}} \cdot dx$$

$$\left. \begin{aligned} y &= 4h \cdot \frac{x^2}{L^2} \\ \frac{dy}{dx} &= \frac{8hx}{L^2} \end{aligned} \right\} \therefore L = 2 \int_0^{l/2} \sqrt{1 + \frac{64h^2 x^2}{L^4}} \cdot dx$$

31. $f(x, y) = 4x^2 + 6y^2 - 8x - 4y + 8$

$$\frac{df}{dx} = 8x - 8 = 0 \quad x = 1$$

$$\frac{df}{dy} = 12y - 4 = 0 \quad y = 3$$

$$r^2 - s^2 = 4 \times 12 - 0 = 48 > 0 \text{ minima. } f(1, 3) \Rightarrow 10/3$$

32. $P_s = 2x \frac{\pi}{4} x d^2 x \tau \sim f = 2x \frac{\pi}{4} x (21.5)^2 x 100 = 72.61 \text{ KN}$

$$P_b = d \cdot t \cdot \sigma_p f = 21.5 \times 14 \times 300 = 90.3$$

Least value is 72.61 KN = R_v = Rivet value

$$\text{Temple sample} = N R_v = 12 \times 72.61 = 871.32 \text{ KN}$$

33. Well size $S = 10 - 1.5 = 8.5 \text{ mm}$

$$[0.7 \times 8.5 \times 1] 110 = 150 \times 100 \times 10$$

$$l = 229.2 \text{ mm}$$

34. B.M at centre = $ML/2 - ML/2 = 0$

35.
$$\bar{x} = \frac{\pi r^2 x 0 - \pi \left(\frac{r}{2}\right)^2 \left(\frac{r}{2}\right)}{\pi r^2 - \pi \left(\frac{r}{2}\right)^2}$$

$$= \frac{-\frac{\pi r^2}{4} \cdot \frac{r}{2}}{\frac{3\pi r^2}{4}} = \frac{-r}{6}$$

36.

$$V_A = 7.5 \text{ KN}$$

$$V_A = \frac{10 \times 15}{2} = 7.5 \text{ KN}$$

$$\text{To calculate } H_A, \sum M_c = 0 \Rightarrow -H_A \times 5 + 7.5 \times 10 - 10 \times 5 = 0$$

$$H_A = 5 \text{ KN}$$

$$\therefore R_A = \sqrt{H_A^2 + V_A^2} = 9.01 \text{ KN}$$

$$\tan \theta = \frac{V_A}{H_A} = 56.31^\circ$$

$$37. \quad \sigma_{z_1} = \frac{3\phi}{2\pi z^2} \left[\frac{1}{1 + \left(\frac{r}{z}\right)^2} \right]^{3/2} \quad (\text{Given})$$

$$\text{for } z=z/2; r=r/2; \sigma_{z_1} = \frac{3\phi}{2\pi \left(\frac{z}{2}\right)^2} \left[\frac{1}{1 + \left(\frac{r}{z}\right)^2} \right]^{3/2} \quad \sigma_z = 4\sigma_{z_1}$$

$$38. \quad K = 2.303 \frac{aL}{At} \log_{10} \frac{h_1}{h_2} \quad 10^{-2} = 2.303 \frac{1}{t} \log_{10} \frac{1.0}{0.75} \quad t = 75 \text{ sec.}$$

39. $Q_{wt} = Q_e + Q_{sf}$ [since pile is in clay so, friction pile $Q_e = 0$]
 $Q_{wt} = Q_{st}$
 $700 \text{ kN} = q_{sf} \cdot A_s$ [L.C.] $\times 4 \times 0.5 \times 1.0$ (for square pile)
 $A_s = 4 \times B \times L = 4 \times 0.25 \times 20$ (LC) $= 700/2 = 350 \text{ kN}$

40. $A = By \Rightarrow B = A/y$

$$P = B + 2y$$

$$P = \frac{A}{y} + 2y \Rightarrow \frac{dp}{dy} = 0 \Rightarrow \frac{-A}{y^2} + 2 = 0$$

$$B = 2y_e$$

As $B = T$; Top width = $2y_e$

$$R = \frac{A}{P} = \frac{By}{B + 2y} = \frac{2y^2}{2y + 2y} = \frac{y}{2}$$

$$R = \frac{A}{P} = \frac{By}{B + 2y} = \frac{2y^2}{2y + 2y} = \frac{y}{2}$$

$$R = \frac{y_e}{2} \text{ Hydraulic Radius}$$

$$Q = \frac{A}{T} = \frac{By}{B} = y_e = \text{Hydraulic depth}$$

Perimeter = $B + 2y = 2y + ey = 4ye$

Hence P-3, Q-4, R-1, S-2

$$41. \quad Fr^2 = \frac{q^2}{g \cdot y_1^3} = \frac{y_c^3}{y_1^3}$$

$$(0.8)^2 = \frac{y_c^3}{(1.5)^3} \Rightarrow y_c = 1.29 \text{ m}$$

42. $D = 0.2 \text{ m}$; $Q = 2720 \text{ Lit/min}$; $Q = 0.0453 \text{ m}^3/\text{s}$

$R_1 = 10 \text{ m}$; $S_1 = 3 \text{ m}$; $r_2 = 100 \text{ m}$; $S_2 = 0.5 \text{ m}$

$$Q = \frac{2.72T(S_1 - S_2)}{\log_{10} \left(\frac{r_2}{r_1} \right)} = 0.0453 = \frac{2.72T(2.5)}{\log_{10} \left(\frac{100}{10} \right)}$$

$$T = 576 \text{ m}^2/\text{day}$$

43. $BOD_3 = 75 \text{ mg/lit}; K^1 = 0.345/\text{day}$
 $BOD_3 = L_0[1 - 10^{-kt}]$
 $K = \frac{K'}{2.303} = \frac{0.345}{2.303} = 0.1498046$
 $75 = L_0[1 - 10^{-0.1498 \times 3}]$
 $L_0 = 116.33 \text{ ppm}$
 $BOD_{10} = 116.33[1 - 10^{-0.1498 \times 10}] = 112.635$
 $BOD \text{ remaining} = 116.33 - 112.635 = 3.69 \text{ ppm} \approx 3.70 \text{ ppm}$
45. $V = 80 \text{ Kmph}; l = 6.6 \text{ m}; W_m = 0.096 \text{ m}$
 $W_e = \text{total widening or carrying way on the}$
 $\text{Curve} = W_m + W_{psy}$
 $W_{psy} = \frac{80}{9.5\sqrt{230}} = 0.555$
 $\text{Total winding} = 0.096 + 0.555 = 0.651 \text{ m}$
47. $RL \text{ or Plinth} = 100.000 - B.S - F.S$
 $= 100.000 - 2.105 - 1.105 = 96.790 \text{ m}$
48. $\text{Total hardness} = Ca^{2+} \text{ ions} \times \frac{50}{20} + Mg^{2+} \text{ ions} \times \frac{50}{12} = 100 \times \frac{50}{20} + 6 \times \frac{50}{12} = 275 \text{ ppm}$
49. $\text{Alkalinity} = HCO_3^- \times \frac{50}{61} = 250 \times \frac{50}{61} = 204.92 \text{ ppm}$
 $\text{Total hardness} > \text{alkalinity}$
 $\text{Carbonate hardness} = \text{alkalinity} = 204.92 \text{ ppm} \approx 205 \text{ ppm}$
50. $AMC = 18 \text{ cm/m}$ or 6.48 cm/m
 $100 \text{ hectares} \text{ ----- } 18$
 $36 \text{ hectares} = 36 \times \frac{18}{100} = 6.48 \text{ cm/m}$
 $d_w = 3.24 \text{ cm}$
 $f_w = \frac{3.24}{0.5} = 6.48 \text{ days}$
 $Q = \frac{3.24}{100} \times \frac{36 \times 10^4}{(6.48 \times 10)(3600 \times 0.75)} = 0.067 \text{ m}^3/\text{s} = 67 \text{ Lt/s}$
51. $\text{Available moisture content} = 0.8 \times 18 = 14.4 \text{ cm}$
 $RAM = 14.4/2 = 7.2 \text{ cm}$
 $\text{Frequency of irrigation} = 7.2/0.4 = 18 \text{ days}$
 $Q = \frac{d_w \times A}{t}$
 $40 \times 10^{-3} = \frac{7.2}{100} \times \frac{A}{18 \times 10 \times 3600} \times \frac{1}{0.75}$
 $A = 27 \times 10^4 \text{ m}^2$
 $A = 27 \text{ ha}$

52. To find N.A. define the in D.R. beams
 $0.36 f_{ic} b x_4 + A_{sc} (f_{sc} - f_{ec}) = 0.87$
 $0.36 \times 20 \times 300 \times x_4 + 628(0.87 \times 250) = 0.82 \times 250 \times 2200$
 $x_4 = 160.91 \text{ mm.}$
53. Since $x_4 < x_{4 \text{ max}} = 0.53 \times 500 = 265 \text{ mm}$
 It is under reinforced
 $M.R = 0.36 f_{ic} b x_4 (d - 0.42 x_4) + A_{sc} (f_{sc} - f_{ec}) (d - d^1)$
 $[0.36 \times 20 \times 300 \times 160.91 (500 - 0.42 \times 160.91) + 628 \times 0.87 \times 250 (500 - 50)] \times 10^{-6} = 209.20 \text{ KNm}$
54. Cohesion = $\frac{\text{unconfined comp. sample the } (q_u)}{2} = \frac{54}{2} = 27 \text{ Kpa}$
55. Given footing is square $D_f = 0$
 For clay = $\phi = 0$
 $N_c = 5.7; N_q = 1.0; N_r = 0$ or
 For square footing
 $q_{wt} = 1.3 C N_c + r_{Df} N_q + \frac{1}{2} r_B N_r = 1.3 C N_c = 1.3 \times 27 \times 5.70$ (since $C_u = q_u/2$) = 200 Kpa
56. Circuitous means round about or not direct. Therefore the closest in meaning will be indirect
57. A worker who is inactive or not working is termed as unemployed, similarly land which is inactive or not in use is called Fallow.
58. The clue in this sentence is 'If we manage to _____ our natural resources' and 'better planet'. This implies that the blank should be filled by a word which means 'preserve' or 'keep for long time'. Therefore the word 'conserve' is the right answer.
59. The key words in the statement are 'casual remarks' and 'lack of seriousness'. The blank should be filled with a word meaning 'showed' or 'revealed'. Hence, 'betrayed' is the correct answer.
60. Representing the given information in the Venn diagram, we have

Let the number of people who play only hockey = a

The number of people who play only football = b

$$\text{Now, } a = n(H) - 10 = 15 - 10 = 5$$

$$b = n(F) - 10 = 17 - 10 = 7$$

$$\text{Clearly, } a + b + 10 + n = 25 \Rightarrow n = 25 - 7 - 5 - 10 \Rightarrow n = 3$$

\therefore The number of people who play neither Hockey nor Football is 3

61.

i) $H + G > I + S$

ii) $|G - S| = 1$

Meaning G & S will be next to each other in the order. So the option A is ruled out.

G not oldest

S not youngest

iii) No twins.

Going by the options, we will try to solve the equation,

Taking an example with youngest aged 1, we can try to solve the equation,

and correct the age (started with ages 4,3,2,1) to suit condition (i) and (ii) which gives 5,4,3,1

S	I + 4	Generalizing, we can take their ages in terms of I's age,
G	I + 3	In this case, $H + G > I + S$
H	I + 2	Since $2I + 5 > 2I + 4$
I	I	

I In this order, G is always less than I and H is always less than S.
 G So $G < I$ and $H < S$
 S Implies $G + H < I + S$, all values are positive
 H Defies condition i) Hence incorrect.

I In this order $H < I$, $G < S$
 H Hence $H + G < I + S$
 S Defies Condition i)
 G Hence incorrect.

62. Given,

5 skilled workers can build a wall in 20 days i.e., 1 skilled worker can build the same wall in 100 days

∴ The capacity of each skilled worker is $\frac{1}{100}$

8 semi-skilled workers can build a wall in 25 days

i.e., 1 semi-skilled worker can build the same wall in 200 days

∴ the capacity of each semi-skilled worker is $\frac{1}{200}$

Similarly, the capacity of 1 unskilled worker is $\frac{1}{300}$.

Now, the capacity of 2 skilled+6 semi-skilled+5 unskilled workers is $2\left(\frac{1}{100}\right) + 6\left(\frac{1}{200}\right) + \frac{5}{300}$

$= \frac{2}{100} + \frac{3}{100} + \frac{5}{300} = \frac{20}{300} = \frac{1}{15}$

∴ The required numbers of days is 15

63. Among the answer choices, the three options B, C and D can be inferred from the passage. But the main essence of the passage is that chemical agents are being used by military establishments in warfare which is not desirable. Therefore option C is the statement which best sums up the meaning of the passage.

64. The given digits are 2,2,3,3,3,4,4,4,4 we have to find the numbers that are greater than 3000
 \therefore The first digit can be 3 or 4 but not 2.
 Now, let us fix the first, second and third digits as 3, 2, 2 and then the fourth place can be filled in 3 ways.
 i.e.,

\therefore the number of ways is 3.

Similarly, we fix first, third and fourth places as 3, 2 and 2 respectively, so the second place can be filled in 3 ways again

The number of ways is 3.

Now, we fix first, second and fourth places just as previous cases and we obtain the same result.

\therefore The number of ways is 3 so; the total number of ways is 9.

Similarly this can do by fixing the numbers as 3 and 4 (instead of 2) and thereby we obtain the 9 ways in each case.

\therefore The number of numbers greater than 3000 starting with 3 is 27

Similarly by taking 4 as the first digit and applying the same process, we get 27 numbers

\therefore The total number of numbers that are greater than 3000 is $27 + 27 = 54$

But, 3222 and 4222 is not possible as there are only two 2's (given), 3333 is also not possible as there are only three 3's (given)

\therefore The total number of numbers that are greater than 3000 is $54 - 3 = 51$.

65. Given, $137 + 276 = 435$
 Adding units digits i.e. $7 + 6 = 13$, but given as 5, which is $13 - 8$ and also 1 is carry forwarded to the tens place.

Here, $7 + 3 + 1 = 11$ i.e., $11 - 8 = 3$ and 1 is carry forwarded to hundreds place

Now, the sum of digits in hundred's place is $1 + 1 + 2 = 4$

Using the same logic, we have

Sum of units digits $1+2 = 3$, sum of tens digit = $3 + 7 = 10$ i.e. $10 - 2$ and $+ 1$ carry forward and
 Sum of hundreds digits = $1 + 7 + 6 = 14$ i.e., $14 - 8 = 6$ and one carry forward.
