Answer the questions given under the passage by choosing the best option for each:

Electronic media is speeding things up and intensifying the complexity of our culture. This phenomenon, dubbed hyperculture, has trickled down to alter the nature of day-to-day interactions, with negative consequences for the shy. Those who are not quick and intense get passed by. The shy are bellwethers of this change. And so it's not surprising that hyperculture is actually exacerbating shyness, in both incidence and degree. It now takes an increasingly powerful personality to be recognized. People have to call attention to themselves in ways that are more and more extreme just to be noticed at all. The shy are put at a further disadvantage.

Hyperculture brings about "interpersonal disenfranchisement." Simply put, we are disconnecting from one another. As other people become just e-mail addresses or faceless voices at the other end of electronic transactions, it becomes easier and easier to mistreat and disrespect them. The cost of such disconnection is a day-to-day loss of civility and an increase in rudeness. And the shy are the first to be excluded, bullied or treated in a hostile manner.

Reaching the limits of our ability to deal with the complexities of our lives, we ourselves have begun to experience a state of anxiety. We either approach or avoid. And, indeed, we are seeing both phenomena -- a polarization of behavior in which we see increases in both aggression, marked by a general loss of manners that has been widely observed, and in withdrawal, one form of which is shyness. Surveys show that the incidence of shyness has risen from 40% to 48%.
