----------------	---------------

M.C.A. DEGREE EXAMINATION –
JUNE 2010.

First Year

COMPUTER ORIENTED NUMERICAL METHODS

Time : 3 hours

Maximum marks : 75

PART A — (5 × 5 = 25 marks)

Answer any FIVE questions.

1. Write about numbers and their accuracy.
2. Describe the method of false position.
3. Find, by Newton's method, the root of the equation $e^x = 4x$, which is approximately 2, correct to three decimal places.
4. Solve by Gauss-elimination method :
 $2x + y + 4z = 12$
 $8x - 3y + 2z = 20$
 $4x + 11y - z = 33.$

5. Describe the Gauss-Jacobi method.

6. Given the data :

$x :$	0	1	2	5
$f(x) :$	2	3	12	147

Find the cubic function of x .

7. Solve the equation $\frac{dy}{dx} = 1 - y$ with the initial condition $x = 0, y = 0$, using Euler's algorithm find the solution at $x = 0.1$ and 0.2 .

PART B — ($5 \times 10 = 50$ marks)

Answer any FIVE questions.

8. Find the root of equation $x^3 - 4x - 9 = 0$ correct to three decimal places by using the bisection method.

9. Show that the equation $x^3 - 3x + 1 = 0$ has a root between 1 and 2. Calculate it to three decimal places using Horner's method.

10. Solve by Gauss-Jordan method :

$$5x - 2y + 3z = 18$$

$$x + 7y - 3z = -22$$

$$2x - y + 6z = 22.$$

11. Solve by Gauss-Seidel method of iteration :

$$27x + 6y - z = 85$$

$$6x + 15y + 2z = 72$$

$$x + y + 54z = 110$$

12. Compute $f(0.9)$ by Newton-Gregory backward difference interpolation formula from the data :

$$x: \quad 0 \quad 0.2 \quad 0.4 \quad 0.6 \quad 0.8 \quad 1.0$$

$$f(x): \quad 1 \quad 1.16 \quad 3.56 \quad 13.96 \quad 41.96 \quad 101$$

13. Dividing the range into 10 equal parts, find the

approximate value of $\int_0^{\pi} \sin x \, dx$ by

(a) Trapezoidal rule and

(b) Simpson's 1/3 rule.

14. Apply the fourth order Runge-Kutta method, to find an approximate value of y when $x = 0.2$ and $h = 0.1$, given that $y' = x + y$, $y(0) = 1$.
