## Solutions to Questions in Science

| Q.No. | Key | Rationale |
| :---: | :---: | :---: |
| 1. | 3 | Mercury is considered as a metal because it has luster and conducting properties. So the alternative 3 is the answer. |
| 2. | 4 | Burning of coal, LPG, CNG and occurrence of ozone at low altitude are causes of air pollution. It is a misconception that CNG does not pollute air. But it is true that as compared to other fuels it pollutes very little. Since all the causes are correct, the answer is alternative 4. |
| 3. | 3 | As the hot air becomes lighter, it rises up. Therefore a smoke detector near or on the ceiling will detect smoke faster than if it is installed at any other place in a room. The correct alternative, therefore, is 3. |
| 4. | 4 | Graphite is very soft because linkage between atoms of two layers of graphite is very weak as compared to other substances. The answer lies at alternative 4. |
| 5. | 4 | Muscles cell will posses the highest number of mitrochondria because they need more energy to work properly as compared to remaining types of cells. The answer, therefore, is 4 . |
| 6. | 3 | Both cytoplasm and nucleus are essential for survival of a living cell. The key, therefore, is 3 . |
| 7. | 1 | The rest of the questions you may reason out yourself. |
