Private Members :

TCode	of type string
NoofAdults	of type integer
NoofKids	of type integer
Kilometres	of type integer

For **each** Kid the above Fare will be 50% of the Fare mentioned in the above table

For example :

If Kilometres is 850, NoofAdults = 2 and NoofKids = 3

Then TotalFare should be calculated as

$$\text{NumofAdults} * 300 + \text{NoofKids} * 150$$

$$\text{i.e. } 2 * 300 + 3 * 150 = 1050$$

```

If the function AllocateMarks () is supposed to Allocate Marks for the records in the file MARKS.DAT based on their value of the member TimeTaken. Write C++ statements for the **statement 1** and **statement 2**, where, **statement 1** is required to position the file write pointer to an appropriate place in the file and **statement 2** is to perform the write operation with the modified record.
