Case Study I :- Raigad farmers vote against reliance SEZ

In a recent first-ever referendum involving farmers held in India, more than 6,000 farmers of 22 Raigad villages have expressed their dissent against the proposed special economic zone of the Reliance Group there. It is a clear indication that acquiring land in the Konkan area for its multi-crore SEZ project is not going to be an easy task for the Reliance Group.

The proposed SEZ of the Reliance Group is going to be amongst the biggest in India. It requires 10,000 hectares of land, of which 3,000 hectares fall in the 22 villages located in the Hetwane dam area. Maharashtra has a total of 131 SEZs that will see an investment of ₹ 1.35 lakh crore in the state. In the process, it will create 6-lakh job opportunities. As per reports, Mukesh Ambani is offering profitable compensation packages to farmers, but they are still not ready to budge from their stance.

The notification issued by the Maharashtra Government in June, 2007 for the land acquisition under Section 6 of the Land Acquisition Act in some villages for the RIL-promoted Mumbai Special Economic Zone Ltd. project in coastal Raigad district of Maharashtra lapsed on 8th June, 2009. The company has therefore put on hold the ₹ 40,000 crore, 10,000 hectare multi-product SEZ project until the Bombay High Court rules on a clutch of petitions on land acquisition for the project filed by NGO's and local farmers. Earlier on the 5th June, 2009, the Supreme Court had dismissed RIL's plea to stay the land acquisition process. The company thus does not want land acquisition against the backdrop of the apex court order and the prevailing opposition in villages.

Case Study 9 :- Mumbai Floods 26/7

The Mumbai floods were caused by the eighth heaviest ever recorded 24-hour rainfall figure of 994 mm (39.1 inches) which lashed the metropolis on 26 July, 2005, and intermittently continued for the next day. 644 mm (25.4 inches) was received within the 12-hr period between

8am and 8pm. Torrential rainfall continued for the next week. The highest 24-hour period in India was 1,168 mm (46.0 inches) in Aminidivi in the Union Territory of Lakshadweep on 6 May, 2004 although some reports suggest that it was a new Indian record. The previous record high rainfall in a 24-hour period for Mumbai was 575 mm (22.6 inches) in 1974.

The financial cost of floods was unprecedented and these floods caused a stoppage of entire commercial, trading, and industrial activity for days. Preliminary indications indicate that the floods caused a direct loss of about ₹. 450 crores (£80 million or US \$100 million). The financial impact of the floods were manifested in a variety of ways.

For the first time ever, Mumbai's domestic and international airports (including Chatrapati Shivaji International Airport, Sahar and Juhu aerodrome) were shut for more than 30 hours due to heavy flooding of the runways and extremely poor visibility. Over 700 flights were cancelled or delayed. The airports reopened on the morning of 28 July, 2005. Within 24 hours of the airports becoming operational, there were 185 departures and 184 arrivals, including international flights. Again from early morning of 31 July, with increase in water logging of the runways and different parts of Mumbai, most of the flights were indefinitely cancelled.

Rail links were disrupted, and reports on late evening of 30 July indicated cancellation of several long distance trains up to 6 August, 2005.

The Mumbai-Pune Expressway, which witnessed a number of landslides, was closed for the first time ever in its history, for 24 hours.

According to the Hindustan Times, an unprecedented 5 million mobile and 2.3 million MTNL landline users were hit for over four hours.

According to the .in registrar (personal communication), the .in DNS servers in Mumbai had to be reconfigured because the servers were not operational.

Factors aggravating the disaster in Mumbai :-

Antiquated drainage system : The present storm-water drainage system in Mumbai was put in place in the early 20th century and is capable of carrying only 25 millimeters of water per hour which was extremely inadequate on a day when 994mm of rain fell in the city. The drainage system is also clogged at several places.

Uncontrolled, unplanned development in Northern Suburbs : Unlike South Mumbai, development in northern suburbs of Mumbai is haphazard and buildings are constructed without proper planning. The drainage plans in northern suburbs is chalked out as and when required in a particular area and not from an overall point of view.
