Read the passage given below and answer the questions given under it:

Writing is not the only way to produce written texts. Until recently, many rich or powerful people would dictate to a secretary rather than write themselves. Some literary and historical works, such as Milton's Paradise Lost, were dictated. Dictating may be advantageous for reasons of speed, or it may be a matter of necessity as in the case of the older Milton, who had lost his sight. Still, if given the choice, most of us would rather write than dictate. The main reason is that when you dictate you have much less control over your text than when you write. In any case, traditional dictation was a form of division of labor between employer and employee, not a way of rendering writing altogether unfashionable. Now, however, the new information technologies the division of labor will be between people and machines.

At present, in 1984, speech recognition software provides speech-to-text conversion. One can read to a computer in natural continuous speech at a conversational pace and see one's words appear on the screen. In a matter of years, it will be possible to speak normally and have the machine transcribe one's speech with very few errors while distinguishing, in the flow of speech, between instructions – e.g. "underline!" – to be obeyed from 'underline' to be transcribed. Soon natural language oral interactions with machines will become the norm rather than the exception.
